

RIEDEL REMOTE PRODUCTION

In recent years, remote production concepts have revolutionized the broadcast and live production landscape, offering a forward-thinking solution to the traditional challenges of on-site event coverage. By enabling the capture, control, and integration of live event feeds from distant venues back to a central studio or production facility, remote production addresses the pressing need for cost efficiency, resource optimization, and quality maintenance in a rapidly evolving industry.

Riedel Communications offers the expertise along with a holistic suite of solutions that unify remote live video production. Our integrated approach combines the strengths of our Simplylive Production Suite, MediorNet media network, and the Artist intercom ecosystem to deliver a seamless experience from capture to distribution. This synergy enables broadcasters and production teams to achieve unparalleled operational efficiency and flexibility, ensuring the delivery of high-quality live content from any location to audiences worldwide.

At the venue...

...MediorNet picks up and distributes all camera signals, as well as commentary and talent audio, and transports tally signals to keep production crews in perfect sync. Communication within the production team is facilitated by Riedel's Artist wired and Bolero wireless intercom systems, which provide clear and reliable duplex communication channels. Bolero's unrivalled audio quality even lets users utilize the system to capture interview audio!

The bridge between the venue and the remote production control room is constructed by Riedel's Venue Gateway solution. This robust connectivity platform is capable of transporting high-definition SRT video streams over standard internet connections, ensuring a reliable, efficient link that maintains the integrity and quality of the live feed across long distances. The venue gateway offers 8 bi-directional channels per unit, to effortlessly transport the SRT videos feeds to/from the venue.

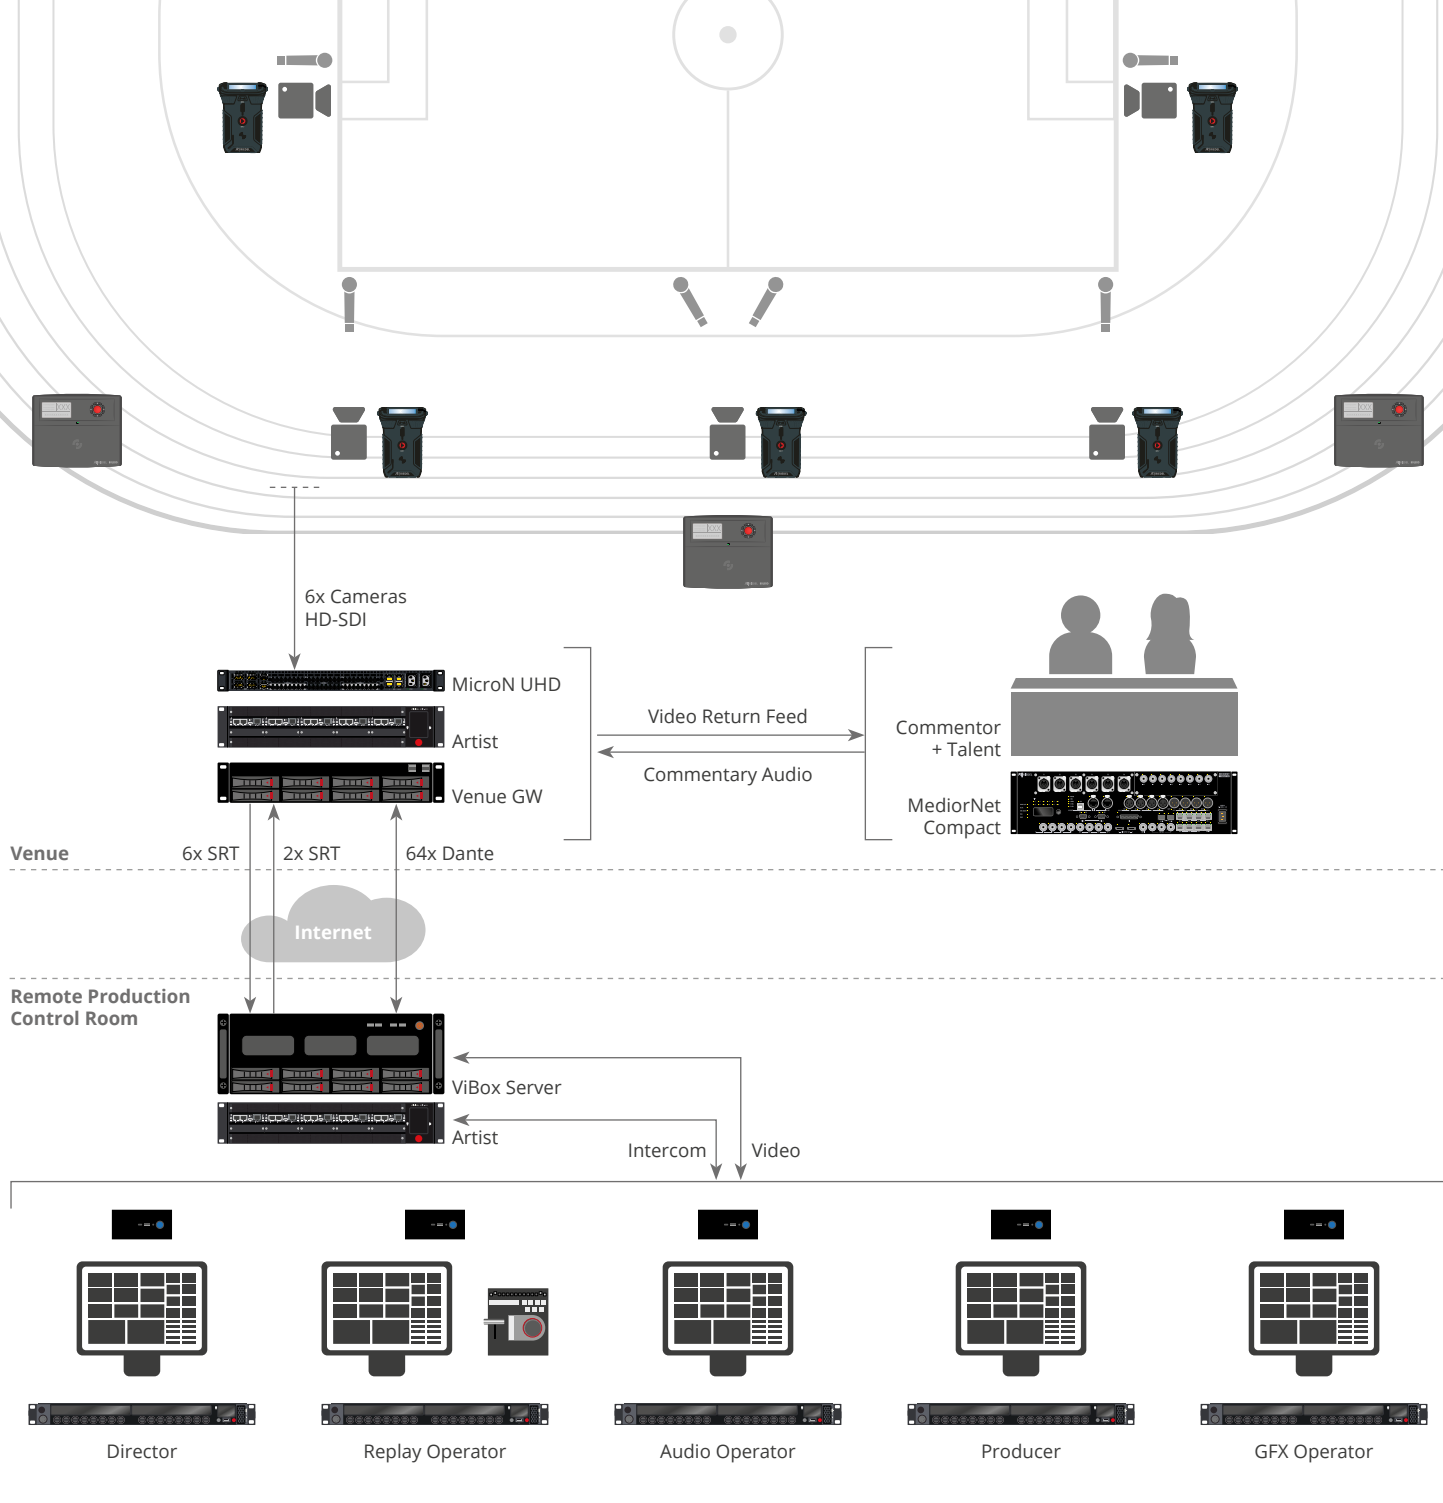

In the Remote Production Control Room...

...the Simplylive Production Suite is the nucleus of operations, providing comprehensive tools for video and audio mixing, replays, and the integration of dynamic graphics – and it even comes with an integrated Web Multiviewer. This powerful suite also supports the easy creation of highlights, ensuring that key moments can be made available as highlight clips on the fly, and even includes a master recorder to efficiently manage the archival of content. Communication and control across the Artist intercom ecosystem are handled by our multi-functional SmartPanel user interfaces, which can simultaneously serve as intercom, control, and audio monitoring panels.

PHYSICAL
OR IN THE
CLOUD!

Riedel is your one-stop shop for all your remote production needs. With our integrated solutions, we empower broadcasters and production teams to overcome geographical constraints and deliver captivating live content to global audiences – while greatly reducing operational costs. Together, we can transform your remote production aspirations into reality, setting new standards for excellence in live video production.
