

STAGE SYSTEMS BY RIEDEL

Behind the seamless magic of every live theater performance lies a complex web of technical challenges – from coordinating intricate lighting and sound cues to managing the myriad of communications between cast, crew, and technical teams. As productions turn into ever-larger, visually stunning spectacles, the increasing complexity of the processes behind the scenes can barely be handled by conventional technology.

Through decades of experience in the theater and live event technology world, Riedel understands the unique workflows, challenges, and customer requirements that define this dynamic industry. That's why we designed a set of customizable theater solutions that are reliable, easy to use, and flexible enough to adapt to the special demands of each production: Riedel Stage Systems.

Riedel Stage Systems harmonize the multifaceted components of theater production into a cohesive, manageable workflow with customizable, integrated solutions that combine state-of-the-art communication technologies with advanced stage management and rehearsal tools. Through cutting-edge technology and user-centric design, they empower stage managers, directors, choreographers, technicians, and creative teams to work more efficiently, communicate more effectively, and focus on the artistry that brings stories to life.

The stage management position is the linchpin that holds performances together, ensuring that every cue, scene change, and technical element aligns perfectly with the artistic vision. This is where the centerpiece and main user interface of our Stage System bundles are typically located. But in the end, you decide what you need and where you need it – your Stage System can even be designed as a mobile version for guest performances in other theaters!

STAGE SYSTEMS BY RIEDEL

- 1 Riedel's multifunctional SmartPanel user interfaces are at the heart of our stage systems, uniting intercom, monitoring & control capabilities within a single panel.
- 2 Stay on top of things with the MediorNet MultiViewer incl. integrated stopwatch & timer. Whether TDM or IP, MediorNet is your reliable video backbone for zero-latency signal routing and distribution.
- 3 Your Artist intercom backbone's extensive feature set provides you and your teams with unprecedented workflow flexibility.
- 4 Integrated in the Artist ecosystem, Bolero delivers high-quality wireless communications for stagehands, wardrobe, or any crew that needs freedom of movement.
- 5 The Riedel NSA Network Stream Adapter facilitates 3rd party signal integration, e.g. for existing analogue paging systems.

Also seamlessly integrate:

- 6 Riedel's brand-new Live Video Production solutions (e.g. for recording and archiving rehearsals and choreographies)
- 7 3rd party PTZ Camera solutions
- 8 3rd party Cue Light systems

+ RIEDEL CARE

Like all Riedel products, Riedel Stage Systems can be covered under an SLA. You don't just get a powerful system, but a strong partner to guide you through any technological challenge that comes your way. With Riedel Care, expert help is always just a call away.

Riedel Stage Systems simplify the complexities of orchestrating a flawless performance, and empower theater crews with streamlined communications, decluttered user interfaces, and real-time monitoring

of the stage action. Our solutions help ensure that all your performances run smoothly, from the opening curtain to the final bow.
