

Riedel Technical Bulletin - Log4j flaw (update)

Dear valued Customer,

In December 2021, a critical vulnerability was found in the Java library **Apache Log4j** (Log4shell), vers. 2.x, see <https://logging.apache.org/log4j/2.x/security.html> (CVE-2021-44228).

Riedel monitors security issues actively and we can confirm that only the following product was affected.

- **EM-Set and MN-Set version 5.10 and before.**

It is highly recommended that users download version 5.11 of MN-Set from the Riedel download section (<https://myriedel.riedel.net/en/downloads/>) to obtain a secure version.

- Fix version: **MN SET 5.11 (Windows 64bit)**
- Fix version: **MN SET 5.11 (Linux)**

For detailed information, download the **MN SET 5.11 Release Note**.

All other products, apps and software are NOT affected.

Our customer support team remains at your disposal via customerservice@riedel.net for further questions.

Best regards

Your Riedel Customer Support
